

# DTECH APPRENTICESHIP SKILLS

A student can earn **GRAND MASTER** status by creating an advanced project that synthesizes most of the skills in this chart. A **GRAND MASTER** must be a **MASTER** in all seven skills before they can petition for **GRAND MASTER** status.

	NOVICE	JOURNEYMAN	MASTER
<b>CAD</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Set document properties</li> <li><input type="checkbox"/> Extrude</li> <li><input type="checkbox"/> Use dimensions</li> <li><input type="checkbox"/> Pass first two modules of Onshape fundamentals course</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Complete the entire Onshape fundamentals course and receive certification</li> <li><input type="checkbox"/> Export a variety of file types for specific uses (.stl and dwg)</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create multi-part drawings with movable assemblies</li> <li><input type="checkbox"/> Accurately dimension objects for laser / 3D print / CNC</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
<b>3D Printing</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass safety test</li> <li><input type="checkbox"/> Import an .stl into Cura from Onshape</li> <li><input type="checkbox"/> Print with help from others</li> <li><input type="checkbox"/> Remove object safely</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Independently print a design from Onshape</li> <li><input type="checkbox"/> Scale objects appropriately for use case</li> <li><input type="checkbox"/> Adjust settings for filament plastic type and diameter in expert settings</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create multi-part objects that fit / click / slide / move together</li> <li><input type="checkbox"/> Adjust expert settings to fit the scenario</li> <li><input type="checkbox"/> Repair / service the 3D printers</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
<b>Laser Cutting</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass safety test</li> <li><input type="checkbox"/> Know the difference between raster and vector</li> <li><input type="checkbox"/> Engrave text and / or an image on a pre-cut stock with help</li> <li><input type="checkbox"/> Focus the laser</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Raster multiple types of materials</li> <li><input type="checkbox"/> Vector cut multiple types of materials and thicknesses</li> <li><input type="checkbox"/> Laser a self-generated drawing in Inkscape or Illustrator</li> <li><input type="checkbox"/> Export the drawing and accurately adjust the laser properties to fit the job</li> <li><input type="checkbox"/> Move X/Y Axis and set new origin</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Master the entire laser workflow with no mistakes</li> <li><input type="checkbox"/> Cut and engrave during the same job</li> <li><input type="checkbox"/> Use the "Color Map" feature to vector cut using different power / speed levels</li> <li><input type="checkbox"/> Create interlocking 3D objects</li> <li><input type="checkbox"/> Use the K40 lasers</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>

<b>Electronics</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass safety test</li> <li><input type="checkbox"/> Setup a basic DC circuit with an LED</li> <li><input type="checkbox"/> Be able to define: voltage, current, resistance, AC, DC, solder</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create a program and run it on a Circuit Playground Express or Arduino</li> <li><input type="checkbox"/> Solder two wires together and test for continuity</li> <li><input type="checkbox"/> Use a multimeter to measure voltage of a power source</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create an advanced electronic project integrating motors, LEDs, sensors, etc. with a program (code)</li> <li><input type="checkbox"/> Solder components onto circuit boards</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
<b>CNC / CAM</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass safety test</li> <li><input type="checkbox"/> Explain relationship between bit size and carved image</li> <li><input type="checkbox"/> Use Easel and / or Carbide Create to simulate a basic 2D carve</li> <li><input type="checkbox"/> Generate a simple toolpath using a custom design</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Independently set up a carve using Easel and Carbide Create</li> <li><input type="checkbox"/> Create a finished carving from start to finish safely without intervention</li> <li><input type="checkbox"/> Mill a text sign for the school / DTech Lab</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create a 3D carve using advanced CAD-CAM techniques and programs like Fusion 360 and Meshcam</li> <li><input type="checkbox"/> Innovates by using multiple tools and toolpaths on one carve</li> <li><input type="checkbox"/> Create roughing and finishing passes</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
<b>Publishing</b> Vinyl Cutter  Large Printer  Dye Sublimation	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass all safety tests</li> <li><input type="checkbox"/> Make a basic vinyl cut</li> <li><input type="checkbox"/> Make a color print using the paper roll on the Canon printer</li> <li><input type="checkbox"/> Can do basic graphic design in Photoshop / Illustrator / Inkscape</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Create custom (self-designed) sticker on the vinyl cutter from start to finish</li> <li><input type="checkbox"/> Use the dye sublimation printer to transfer design to another object</li> <li><input type="checkbox"/> Can load new paper and print using several different settings on the Canon</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Make a large, complex vinyl sticker</li> <li><input type="checkbox"/> Sublimate onto novel surfaces</li> <li><input type="checkbox"/> Create professional published posters / photos using the Canon printer</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
<b>Silkscreen</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Pass safety test</li> <li><input type="checkbox"/> Can write down the basic silk screening steps without aid</li> <li><input type="checkbox"/> Has the step-by-step printed guide for reference</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Make a series of T-shirts using custom created artwork with the photo emulsion method of screen printing</li> <li><input type="checkbox"/> Maintains a clean working environment</li> <li><input type="checkbox"/> Can clean and reclaim screens</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> Make a multi-color print with proper screen registration</li> <li><input type="checkbox"/> Can make 20+ shirts with excellent quality control</li> <li><input type="checkbox"/> Tried silk screening on other materials</li> <li><input type="checkbox"/> Teach others (publish work)</li> </ul>
